

HEX

Home Equity Express (HEX) is a technology that expedites the home equity lending process, injecting speed and efficiency to enable an exceptional borrower experience. HEX is an extremely fast and intuitive way to process a home equity loan.

- » **Speed.** Spend less time processing and underwriting loan files, order with one click, access all needed information in a single platform, and deliver a clear-to-close in as little as two business days.
- » **Efficiency.** A simplified home equity process results in reduced training time, less manual data entry, and fewer errors.
- » **Borrower Experience.** An automated loan processing workflow gives financial institutions the flexibility, speed, and efficiency required to reduce turnaround time, improving the borrower experience.

» How does HEx™ work?

Instead of ordering and managing collateral verification information a la carte, LenderClose *IT*™ HEx combines each step of the loan application into a single, automated workflow, increasing speed and efficiency. This results in reduced training time, less manual data entry, fewer errors, and most importantly, being clear to close on a home equity loan in as little as two business days.

What happens when you partner with a fabulous company like LenderClose? You drop your “days to close” on home equity loans by nearly 60%! We’re so excited to work with LenderClose to provide the fastest experience for our members.”
